1. Overall Description

In our project we have to generate an invoice, enter a barcode number, save it in the order item and invoice item tables, print the invoice, save the product mrp in the order item and invoice, and print the invoice.

2. Functional Requirements

Admin Panel:

In the admin panel of order and account information we have to Barcode number should be there. In this we have to create number of text boxes according to the quantity of the product. While entering barcode number in the textbox the product has to be displayed. After that, save the data to the database table for invoice and order items. Barcode information and MRP should be printed on the invoice as well. Both the barcode number and MRP should be printed on the invoice.
